

Listing of Claims:

1-13 (Previously Cancelled)

14. (Currently Amended) A mold for molding a part, said mold comprising:
two plates forming a shared cavity for molding said part;
~~at least one pin two pins being situated in said cavity when said mold is closed, and at least one each~~ of said plates including a hole for providing therein a limited travel for ~~said pin~~ one of said pins, said pin each of said pins having a shape for molding an undercut region in said part molded in said cavity, ~~said hole each of said holes~~ enabling said mold to partially open without pulling said ~~pin~~ pins from said undercut ~~region~~ regions until said part has been released from the cavity; and

B1
means responsive to a complete opening of said mold for pulling said ~~pin~~ pins from said undercut ~~region~~ regions after said part has been released from the hold of the mold cavity;

wherein, when the mold is closed, said pins abut with each other between the first undercut region and the second undercut region and align with each other to form a single bore in said molded part; and

wherein said part is retained on said first pin after leaving the first plate for further mold release and on said second pin after leaving the second plate before being ejected from said mold.
